Bruce:

Attached is a diagram from [REDACTED] It assumes a CPU and COMTEN dedicated to Community RECON and located in the Ruffing Center. This was presented to [REDACTED] as a possible approach. The actual configuration will be dependent on the requirement for service from the Community, the location of the host computer, security limitations, etc.

As I mentioned yesterday, OCR has not started work to develop the capability to scan the RECON title. We looked at the possibility some time ago and decided not to.

In your memo for the record, the question was raised as to whether RECON was certifiable as a compartmented system under DCID 1/16. From our reading of the DCID, we believe it would be (we checked and found that no CIA data base has been forwarded for certification).

I talked with [REDACTED] today and we are on track re participation in the working group. Will keep you informed.
